

# EDS Discovery Health<sup>TM</sup>

*The Medical Research Platform*

**Can your clinicians search**

*Harrison's, New England Journal of  
Medicine, and DynaMed Plus<sup>®</sup>*

**at the same time?**

# Do you need a Discovery product?

How easy is it for your patrons to locate and search all of your eResources at once?

How many different platforms are your eResources hosted on?

How do you direct patrons to the right databases?

What do your students/users think about your library's website?

Do you think you're getting good usage out of your databases?

What is your strategy for improving electronic resource usage across all platforms?  
What would you say to getting better database usage and lowering your cost-per-use?

How much do you struggle with keeping patrons away from Google and Wikipedia?

How beneficial would a Google-like, single search box for all of your electronic resources be to your library?

# EDS Discovery Health supports access to critical medical resources

1. Quick access to all the resources in the hospital with a customizable, next-generation interface.
2. Enables you to find the information you need from multiple sources through one single search box.
3. Always relevant and current results
4. Increased visibility and usage of your hospital's resources
5. Interoperability with existing intranet or local policies & procedures, citations, analytics tools via app store
6. Customizable profiles for different groups of researchers
7. Subject indexing and thesauri fully integrated with PubMed's indexing, CINAHL, MeSH, APA headings, etc. via *Enhanced Subject Precision*

# Why EDS Discovery Health?

# *EDS Discovery Health* is next generation technology:

- Vastly superior relevancy and value rankings
- Superior quality of metadata
- Inclusion of subject indexes *not found on PubMed*
- A single search box; more intuitive experience for user
- Can search within the full text of an article, *PubMed cannot.*
- Saves time for the end user
- Improve ROI of electronic resources
- Full Text Finder comes complementary
- Branding and customization
- Integration of EDS with other vendors (UTD, Clinical Key, Ovid)
- EBSCO eBooks are discoverable

### Discovery **Relevancy Ranking** | EBSCO Discovery Service

[www.ebscohost.com/.../relevancy-ranking](http://www.ebscohost.com/.../relevancy-ranking) ▾ EBSCO Information Services ▾

How a field is used by a search engine determines the **relevance ranking**, and thus how high on the search results, any given record appears for a search.

### **Relevance** (information retrieval) - Wikipedia, the free ...

[en.wikipedia.org/wiki/Relevance\\_\(information\\_retrieval\)](http://en.wikipedia.org/wiki/Relevance_(information_retrieval)) ▾ Wikipedia ▾

In information science and information retrieval, **relevance** denotes how well a ... impact factor to **rank** output and thus base **relevance** on expert evaluations. History - Evaluation - Clustering and relevance - Epistemological issues

### EBSCO Support: How is **relevance ranking** determined in ...

[support.epnet.com/knowledge\\_base/detail.php?id=3971](http://support.epnet.com/knowledge_base/detail.php?id=3971) ▾

EBSCO Discovery Service (EDS) employs a comprehensive **relevance ranking** strategy that utilizes numerous criteria, including term frequency, field weighting, ...

### [PDF] **Web Search Relevance Ranking** - Microsoft Research

[research.microsoft.com/.../eds-websearchrelevanceran...](http://research.microsoft.com/.../eds-websearchrelevanceran...) ▾ Microsoft Research ▾

by H ZARAGOZA - Cited by 3 - Related articles

the page's relevance to the user query. The problem with web search **relevance ranking** is to estimate relevance of a page to a query. Nowadays, commercial.

### **Relevance Ranking** of Keyword Search Results

[www.dartmouth.edu/~library/home/.../ranking.html](http://www.dartmouth.edu/~library/home/.../ranking.html) ▾ Dartmouth College ▾

Mar 19, 2014 - Keyword search results are automatically sorted according to **relevance ranking**. You also have the option of sorting the results by date or title.

### What Does Relevant Mean? A search engine **relevancy** ...

[www.searchtechnologies.com/.../meaning-of-releva...](http://www.searchtechnologies.com/.../meaning-of-releva...) ▾ Search Technologies ▾

**Relevancy ranking** is the process of sorting the document results so that those

The first result in Google is detailed information about how relevance ranking / value ranking works in EDS...

# Open / Superior Relevance Ranking

The system has the following priorities and has no bias toward content from any provider:

1. Match on subject headings from controlled vocabularies
2. Match on article titles
3. Match on author keywords
4. Match on keywords within abstracts
5. Match on keywords within full text

**Exact Matches:** Exact matches are favored over partial matches – considering also the field in which those words appear (abstract vs. full text vs. title, etc.)

**Density:** Matches across multiple metadata fields are favored for relevance scoring (more is better). The scoring influence of repeat terms within individual metadata fields is minimized.

# Value Ranking: Quality & Openness

## REGENCY

Recently published content  
is scored higher for relevance  
than older content

# Value Ranking: Quality & Openness

## LENGTH

Articles of a more substantial length  
have a heavier weighting  
(e.g. a  $\frac{1}{4}$  page article is considered  
less valuable than a four page article)

# Value Ranking: Quality & Openness

## DOCUMENT TYPE

Certain document types are weighted higher than others for relevance scoring. For example, when the word “book” or “review” are not searched, there is a bias against book reviews, so these don’t dominate results

# What is Metadata?

- Metadata is “data about data” or data that provides information about other data
- 3 Types of Metadata
  - Structural indicates how objects are put together (pages in a chapter)
  - Administrative helps manage a resource (file type, when and how created, who can access, and other technical information)
  - Descriptive is used for discovery and identification (title, abstract, author, and keywords)
- Purpose of metadata is to organize electronic resources, provide digital identification and support archiving of resources.

# Technology & Metadata are both advantages of *EDS Discovery Health*

- *EDS Discovery Health* already incorporates the features and approach necessary for inclusion of the most important third party databases
- EBSCO obtains the highest quality metadata by listening to and responding to the needs of content providers

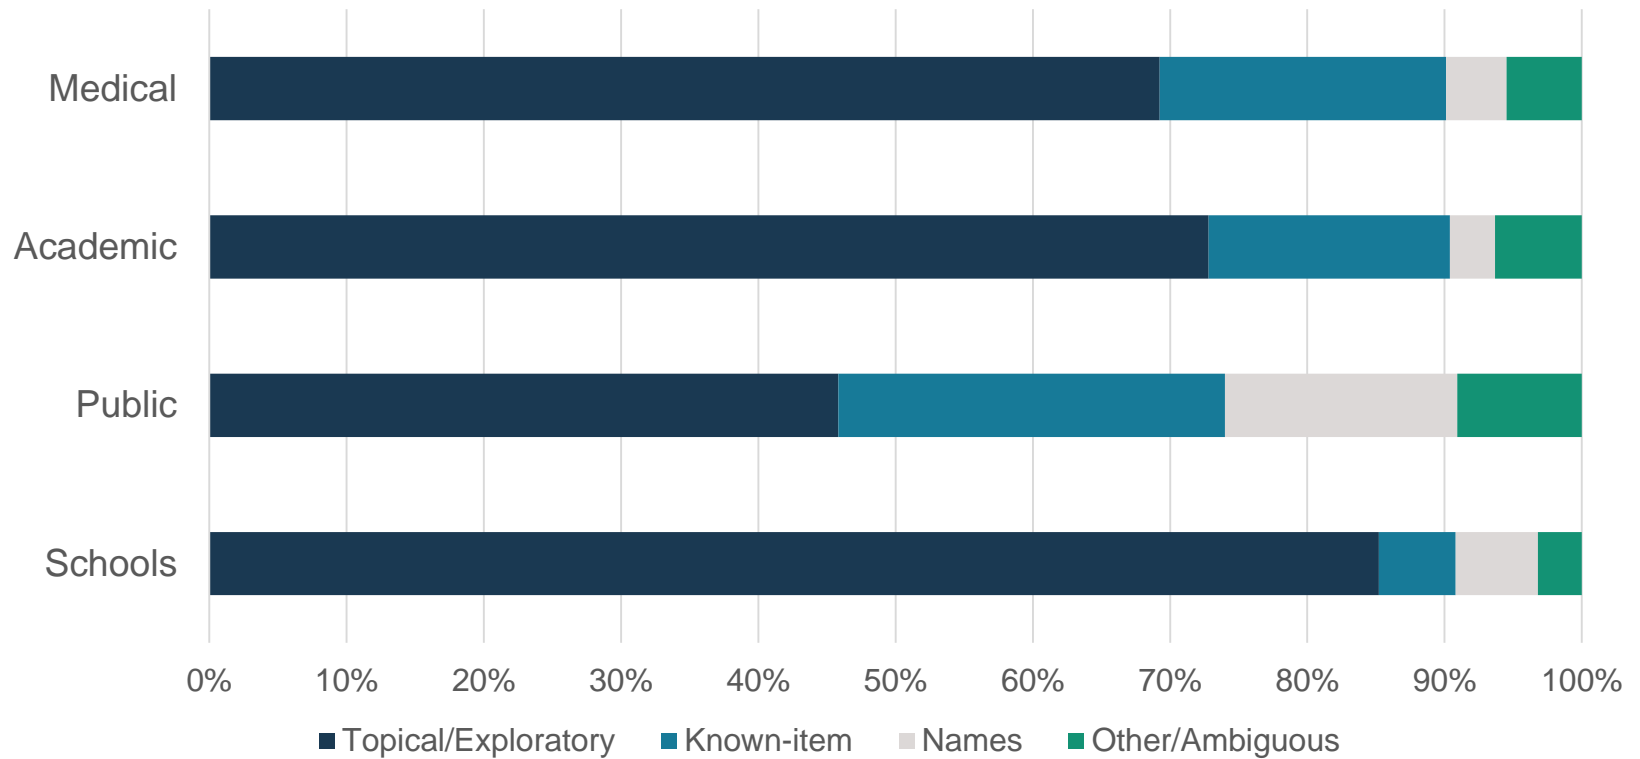

# Enhanced Subject Precision (ESP)

What is it?

*Enhanced Subject Precision* is a  
**RELEVANCE RANKING  
ENHANCEMENT**  
for topical searches

# Topical Search Dominates

Topical search dominance observed in all libraries

Based on one-week sample of **randomly selected** EDS search queries by library type (Sept-2014)

# Problem: Missed Connections

TOPICAL QUERY	Subject Indexing in <i>EDS Discovery Health</i>
adhd	Attention-deficit hyperactivity disorder Attention deficit disorder with hyperactivity
pheromones	Ectohormones Allelochemicals Semiochemicals Allomones
PET scan	Positron Emission Tomography Tomography, Emission-Computed Emission Tomography
tumors	Tumors Neoplasms Neoplasms, cystic, mucinous, and serous

User queries and subject indexing not always aligned.  
Different vocabularies often use different terminology for the **same concept**.

# Example (without ESP)

Atarax = Manufacturer brand name for drug Hydroxyzine

Searching: BartonPlus
